

Altec Website

Functionality & Module Documentation

Prepared 2026-07-21 · Reflects the site as currently live at altec.appamora.com (staging)

Contents

1. What This Document Covers
2. Public Site — Pages & Features
3. Navigation Structure
4. Admin CMS — Modules
5. Media & File Uploads
6. Multi-Language Support
7. Technical Architecture Summary
8. Known Limitations & Gaps

1. What This Document Covers

This is a snapshot of everything the Altec website can do as of this writing — every public page, every admin panel module, and the underlying capabilities (uploads, languages, etc.) that power them. For the business rationale and initial architecture decisions, see [Altec-Architecture-Proposal.pdf](#). For how to deploy changes, see [DEPLOY.md](#) in the project repository.

2. Public Site — Pages & Features

Home /

- **Hero slideshow** — full-width, auto-advancing, image or video slides with title/subtitle/button, fully editable from the admin panel (see Slideshow module below). Falls back to a static promotional banner (from Settings) if no slides are configured.
- Three-card intro strip: AC Sales & Installation, Reconstruction & Furnishing, Viessmann Partnership
- **Featured Products** — the 4 most recently added published products, with thumbnail photos
- **Recent News** — the 3 most recent published news posts
- **Partners section** — scroll-down section (not a separate nav page) pulling the "Partners" page content plus a Viessmann highlight card

AC Sales & Installation /ac-sales-installation

- Products grouped by category (currently: Residential Monosplit, Residential Multisplit, Commercial & Solar-Ready)
- Each product card: thumbnail photo, brand tag, name, description, and a "Download datasheet (PDF)" link when a brochure is attached

Reconstruction & Furnishing /reconstruction-furnishing

Lists service categories (secondary line of business, alongside the primary AC focus).

About Us /about

Free-text company description, editable via the admin Pages module.

Works — Portfolio /works and /works/{id}

- Image-driven portfolio grid — each project shows its primary photo, project type tag, and title
- Clicking a project opens a detail page with the full photo gallery and description

News `/news` **and** `/news/{slug}`

List of published posts linking to individual articles. Also reachable via two footer links ("News" and "Blog," both pointing at this same section).

Contact `/contact`

Displays contact details from Settings, plus a form (name/email/phone/message) that saves directly to the database — reviewed in the admin's Contact Submissions module.

3. Navigation Structure

Menus are entirely admin-editable, not hardcoded, and are split into two independently managed placements:

Location	Current items	Notes
Primary (header)	Home, AC Sales & Installation, Reconstruction & Furnishing, About Us, Works, Contact	Partners was intentionally removed from here — it now lives as a homepage section instead
Footer	News, Blog	Both link to the same News section; "Blog" is a second label for the same content, not a separate module

Each menu item can link to a static URL, a Page, or a Category, can be nested under a parent, has a manual sort order, a visibility toggle, and now a Primary/Footer placement — all editable from the admin Menu module.

4. Admin CMS — Modules

Reachable at `/admin` (single login, session-based auth). Every module below follows the same pattern: a list table, an add/edit form, and per-language fields for translatable content.

Dashboard

At-a-glance counts: total products, works, news posts, and unread contact submissions.

Products

- Category, brand, published toggle, PDF brochure (upload or paste a URL)
- **Photo gallery** — upload multiple images, pick which one is the thumbnail shown on public cards
- Name/description in English, Italian, and Albanian

Categories

Product or Service type, optional parent category (for nesting), translated names.

Menu

Add/edit/reorder navigation items; choose Primary or Footer placement, link type (URL/Page/Category/Custom), target, visibility, and translated labels.

Slideshow

- Add homepage hero slides — each one is an **image or a video**, uploaded directly
- Optional link URL (what the slide's button points to), sort order, visibility toggle
- Translated title/subtitle per slide

Works

Project type, date, translated title/description, and the same multi-photo gallery + thumbnail-picker as Products.

News

Slug, cover image, publish date, translated title/body. Unpublished (no publish date) posts don't appear on the public site.

Pages

Free-form content pages by slug (currently: About, Partners), with SEO title/description fields and translated title/body.

Settings

Site name, contact phone/email/address, social media links, homepage promotional text (used only when no slideshow slides exist).

Contact Submissions

Read-only inbox of everything submitted through the public contact form.

5. Media & File Uploads

A single upload endpoint handles all file uploads across the admin panel. Every upload is verified server-side by actually inspecting the file's content (not trusting the filename or what the browser claims it is), so a relabeled file can't slip through as something it isn't.

Type	Accepted formats	Size limit	Used by
Images	JPEG, PNG, WebP, GIF	8 MB	Product photos, Work photos, Slideshow images
Video	MP4, WebM	40 MB	Slideshow video slides
Documents	PDF	15 MB	Product brochures/datasheets

Uploaded files are stored on the server with randomized filenames (not the original filename) and are not executable as scripts even if something malicious were uploaded, as an extra safety layer.

6. Multi-Language Support

The site supports **English, Italian, and Albanian**. Visitors switch language via the header (EN / IT / AL); the choice is remembered in a cookie so it persists across pages without needing to reselect it. All content types with translatable text (products, categories, menu labels, pages, news, works, slides) have separate fields per language in the admin panel.

7. Technical Architecture Summary

Layer	Technology
Public site	Plain PHP, server-rendered per request
Admin panel	React + TypeScript, built to static files with Vite
API	PHP REST endpoints, session-based auth
Database	MySQL / MariaDB via PDO
Hosting	Shared GoDaddy cPanel account — no Node.js runtime on the server at any point

Full details in `Altec-Architecture-Proposal.pdf` and `DEPLOY.md`.

8. Known Limitations & Gaps

CONTENT, NOT CODE

Switching to Italian currently shows empty sections for categories/products/pages that haven't had their Italian translation filled in yet via the admin panel (only the navigation menu falls back to English automatically). This resolves itself as content is translated — it isn't a bug to fix.

- No CSRF tokens on admin state-changing requests (relies on same-site cookie behavior only)
- No login rate-limiting/lockout
- No spam protection (CAPTCHA/honeypot) on the public contact form
- Single admin account — no roles/permissions, no 2FA
- HTTPS not yet enforced (depends on the hosting account's SSL/TLS setup)
- Works/portfolio has no example content yet — deliberately left empty rather than filled with placeholder projects, since claiming fake completed work would be misleading
